

Footnote Extraction Test

v4 (CSS GCPM float: footnote)

This variant uses real CSS Generated Content for Paged Media footnotes (`float: footnote`), which WeasyPrint has partial support for, rather than a hand-built `<div class="footnotes">` block with manual anchors. The idea is that this produces a genuinely different PDF structure (an actual footnote area at the bottom of the page, generated by the layout engine itself) that Docling's layout model might recognize differently than a styled div that merely looks like a footnote block¹.

At vero eos et accusamus et iusto odio dignissimos ducimus qui blanditiis praesentium voluptatum deleniti atque corrupti quos dolores et quas molestias excepturi sint occaecati cupiditate non provident.

1. This is a real CSS `float: footnote` footnote, generated by the layout engine.
2. A second real footnote, on the same page.
